Individual Assignment 2: Musanze Harvest Intelligence Service

Student	Arop Malual
Registration number	25/27389
Institutional username	ug2527389@ines.ac.rw
Verification code	**AI-A2-7389**
Module	SWE 3513 Artificial Intelligence
Dataset fingerprint (SHA-256)	`8acc1963f35734be0573f8f05034bf944c451a4a02297a837060250cc81d61e5`

I, **Arop Malual**, registration number **25/27389**, declare the following about the work I am submitting:

- I am the individual author of this submission and I am responsible for everything in it.
- My dataset was generated by my own script, data/generate_data.py, using my personal seed 7389 (the last four digits of my registration number). The dataset is **synthetic** and contains no real farm or personal data.
- I ran the system on my own computer (Windows, Python 3.13) and obtained the dataset fingerprint shown above. My 19 automated tests all passed.
- **Use of AI.** I used an AI assistant (Claude, by Anthropic) to help generate the project code, the tests and drafts of the written documents. I have disclosed this in evidence/AI_USE.md. I have read and run the code, and I can explain it and make a small change to it when asked.
- The results, metrics and plots in my report were produced by my own runs of run_all.py and agree with the files in the artifacts folder.
- The submission contains no passwords, tokens or private keys, and no virtual environment, cache folders or unrelated datasets.
- I understand that a submission with mismatched seeds, copied fingerprints, identical explanations or unexplained code may be referred for academic integrity review.
- The system is a classroom prototype. It must not be used to replace an agronomist or to decide access to finance, insurance or public services.
